# JavaScript Async/Await & API Handling

## Understanding Asynchronous JavaScript

- JavaScript is Single-Threaded
- Imagine JavaScript as a chef in a small kitchen who can cook only one dish at a time (single-threaded).
- If the chef waits for water to boil before cutting vegetables, cooking will take forever!
- Instead, the chef multitasks—they put water to boil, then start chopping, and later check the water.

This is how asynchronous JavaScript works!

[+92 330 2021926](https://wa.me/+923302021926)

## Why Do We Need Asynchronous JavaScript?

JavaScript executes one operation at a time, but some tasks take time, like:

- Fetching data from a server
- Reading a file
- Waiting for a timer

If JavaScript waited for each task to finish, the whole program would freeze! Instead, it delegates long tasks and continues running other code.

## What is Async/Await?

**Async/Await** is a way to handle **asynchronous** code in JavaScript, making it easier to read and write.

## Why do we need it?

JavaScript runs code line by line, but sometimes we need to wait for tasks like:

- Fetching data from a server (API calls)
- Reading a file
- Waiting for a timer

Earlier, we used callbacks (which led to "callback hell") or promises (.then()), but async/await makes it much cleaner!

[linkedin.com/in/m-munim1](https://linkedin.com/in/m-munim1)

[+92 330 2021926](https://wa.me/+923302021926)

## Breaking it down:

- `async` keyword

When you add `async` before a function, it automatically returns a promise.

```
async function getData() {  
    return "Hello, World!";  
}  
getData().then(console.log); // Output: Hello, World!
```

[linkedin.com/in/m-munim1](https://www.linkedin.com/in/m-munim1)

[github.com/M-Munim](https://github.com/M-Munim)

[+92 330 2021926](https://wa.me/+923302021926)

## await keyword

- await pauses the function until the promise is resolved.
- It must be used inside an async function.

```
async function fetchData() {  
    let response = await fetch("https://api.example.com/data");  
    let data = await response.json();  
    console.log(data);           // This runs **only after** the data is fetched  
}  
fetchData();
```

## Example: Without and With Async/Await

- ✗ Without Async/Await (Using .then())

```
fetch("https://api.example.com/data")
  .then(response => response.json())
  .then(data => console.log(data))
  .catch(error => console.log(error));
```

+92 330 2021926

## With Async/Await (Cleaner & Easier)

```
async function getData() {  
    try {  
        let response = await fetch("https://api.example.com/data");  
        let data = await response.json();  
        console.log(data);  
    } catch (error) {  
        console.log(error);  
    }  
}  
getData();
```

## Working with APIs using Fetch & Async/Await

### What is an API?

An API (Application Programming Interface) allows different applications to communicate with each other.

For example:

- A weather app gets live weather updates from an API.
- A shopping app fetches product details from an API.

[+92 330 2021926](https://wa.me/+923302021926)

## What is fetch?

JavaScript provides the `fetch()` function to get data from APIs.

- It sends a request to the API.
- The API sends back data (usually in JSON format).
- We then process and use the data in our program.

## Fetching Data from an API

### Example: Fetching Random Users from an API

[linkedin.com/in/m-munim1](https://www.linkedin.com/in/m-munim1)

[github.com/M-Munim](https://github.com/M-Munim)

[+92 330 2021926](https://wa.me/+923302021926)

## Web Development

```
async function fetchUser() {  
    try {  
        let response = await fetch("https://randomuser.me/api/"); // Fetch data from a public API  
  
        let data = await response.json(); // Convert response to JSON format  
  
        let user = data.results[0]; // Extract user details  
        console.log("User Name:", user.name.first, user.name.last);  
        console.log("Email:", user.email);  
        console.log("Country:", user.location.country);  
    } catch (error) {  
        console.log("Error fetching data:", error);  
    }  
}  
  
fetchUser();
```

[github.com/M-Munim](https://github.com/M-Munim)

+92 330 2021926

## Breaking Down the Code:

- `fetch("https://randomuser.me/api/")` → Sends a request to the API.
- `await response.json()` → Converts the response into JSON format.
- Extracts user data (e.g., name, email, country).
- Handles errors using `try...catch`.

[linkedin.com/in/m-munim1](https://www.linkedin.com/in/m-munim1)

[github.com/M-Munim](https://github.com/M-Munim)

[+92 330 2021926](https://wa.me/+923302021926)

## How the API Response Looks (JSON Format)

When we call the API, it returns data like this:

JSON:

```
{  
  "results": [  
    {  
      "name": { "first": "John", "last": "Doe" },  
      "email": "johndoe@example.com",  
      "location": { "country": "USA" }  
    }  
  ]  
}
```

We extract name.first, name.last, email, and location.country from this JSON.

## Example: Fetching API Data and Displaying in HTML

```
<body>
  <button id="fetchBtn">Fetch User</button>
  <p id="userData"></p>

  <script>
    document.getElementById("fetchBtn").addEventListener("click", async function() {
      try {
        let response = await fetch("https://jsonplaceholder.typicode.com/users/1");
        let data = await response.json();
        document.getElementById("userData").textContent = `Name: ${data.name}, Email: ${data.email}`;
      } catch (error) {
        document.getElementById("userData").textContent = "Failed to fetch data";
      }
    });
  </script>
</body>
```

# Web Development

## Submission Notes

### Capture Evidence:

- Take screenshots or record a short video for each task.
- Ensure your evidence clearly shows the completed task.

### Upload Tasks:

- Upload each task as a separate folder or file in your GitHub repository.

### LinkedIn Post:

- Create a short post summarizing what you learned and how you completed the tasks.
- Highlight your key takeaways.
- Mention the following account in your post:
- **Muhammad Munim**

[linkedin.com/in/m-munim1](https://linkedin.com/in/m-munim1)

[github.com/M-Munim](https://github.com/M-Munim)

[+92 330 2021926](https://wa.me/+923302021926)

# Thank You
